1 Scope

1.1 In-Scope

- **Renewal Risk Management:**

- Contract expiration tracking and automated alerts
- Multi-factor churn prediction using ML models
- Customer health scoring based on usage, engagement, and sentiment
- Risk segmentation (High, Medium, Low) with confidence scores

- **Upsell & Cross-sell Intelligence:**

- Product adoption and feature usage analysis
- Revenue expansion opportunity identification
- Cross-sell recommendations based on customer profile and behavior
- Whitespace analysis for untapped product offerings

- **Automated Playbook Recommendations:**

- Personalized renewal and expansion plays
- Multi-channel outreach cadence suggestions (Email, Phone, Meeting)
- Value messaging templates tailored to customer pain points and outcomes
- Best-action recommendations with success probability scores

- **Integration Capabilities:**

- Primary: Salesforce CRM, Stripe/Chargebee billing platforms, Google Analytics/Mixpanel
- Secondary: Customer Success platforms (Gainsight, ChurnZero), Email (Gmail, Outlook), Product analytics tools
- Webhook-based real-time data synchronization

- **Analytics & Reporting:**

- Renewal forecast dashboard with ARR projections
- Pipeline health metrics and trend analysis
- Agent performance tracking and recommendation outcomes
- Executive summary reports with KPI visualization

1.2 Out-of-Scope

- Contract negotiation and legal document generation
- Direct payment processing and transaction handling
- Customer onboarding and implementation workflows

- Product roadmap planning and feature prioritization
- Marketing campaign creation and execution
- Technical support ticket management
- Full financial accounting and revenue recognition
- Integration with non-B2B SaaS business models (e.g., e-commerce, retail)
- Manual override of contract terms or pricing
- Real-time voice call monitoring and transcription

2 Functional Requirements

2.1 FR-1: Contract & Renewal Tracking

2.1.1 FR-1.1: Contract Data Ingestion

- System SHALL ingest contract data from Salesforce including: contract ID, account name, ARR/MRR, start date, end date, renewal date, contract terms
- System SHALL automatically sync contract updates within 5 minutes of changes in source system
- System SHALL support bulk import of historical contract data (minimum 5 years)

2.1.2 FR-1.2: Renewal Timeline Monitoring

- System SHALL track all contracts with renewal dates within 90-day window
- System SHALL automatically create renewal opportunity records in Salesforce 90 days before expiration
- System SHALL categorize renewals by time horizon: Immediate (0-30 days), Near-term (31-60 days), Future (61-90 days)

2.2 FR-2: Churn Risk Prediction

2.2.1 FR-2.1: Risk Scoring Model

- System SHALL calculate renewal risk score (0-100) for each account using ML model
- Risk score SHALL incorporate features: product usage (login frequency, feature adoption), support metrics (ticket volume, resolution time), payment history (late payments, failed charges), engagement (email opens, meeting attendance), sentiment (NPS, survey responses)
- System SHALL update risk scores daily via batch processing
- System SHALL provide 85% prediction accuracy (validated on historical data)

2.2.2 FR-2.2: Risk Segmentation

- System SHALL classify accounts into risk categories:
 - High Risk: Score 70-100 (churn probability >50%)
 - Medium Risk: Score 40-69 (churn probability 25-50%)
 - Low Risk: Score 0-39 (churn probability <25%)
- System SHALL display top 5 risk factors for each account
- System SHALL provide confidence intervals for predictions

2.2.3 FR-2.3: Early Warning Alerts

- System SHALL send real-time alerts when account moves to High Risk category
- Alerts SHALL include: account name, ARR at risk, risk score, primary risk factors, recommended actions
- System SHALL support alert routing rules (assign to CSM, AE, or team lead based on account ownership)

2.3 FR-3: Upsell & Cross-sell Identification

2.3.1 FR-3.1: Expansion Opportunity Detection

- System SHALL identify upsell opportunities based on:
 - User license utilization (threshold: >80% of purchased seats)
 - Feature usage patterns (high engagement with premium features on basic plan)
 - API usage limits (approaching rate limits)
 - Storage consumption (exceeding 75% of allocated quota)
- System SHALL calculate expansion revenue potential for each opportunity
- System SHALL rank opportunities by expected value and win probability

2.3.2 FR-3.2: Cross-sell Recommendations

- System SHALL recommend complementary products based on:
 - Current product usage (collaborative filtering)
 - Industry segment and company size
 - Similar customer adoption patterns
- System SHALL support whitespace analysis (identify unused products in customer's plan tier)

2.3.3 FR-3.3: Opportunity Qualification

- System SHALL assign propensity score (0-100) to each upsell opportunity
- System SHALL filter opportunities with score >60 for proactive outreach
- System SHALL estimate deal size and expected close date

2.4 FR-4: Automated Playbook Recommendations

2.4.1 FR-4.1: Playbook Library

- System SHALL include minimum 15 pre-built playbooks:
 - Renewal Playbooks: High-Risk Intervention, Executive Business Review, Value Realization Workshop, Competitive Displacement Defense
 - Upsell Playbooks: License Expansion, Feature Upgrade, Multi-Year Commitment, Premium Support Add-on
- Each playbook SHALL contain: trigger conditions, outreach cadence (timeline), email/call script templates, success metrics

2.4.2 FR-4.2: Playbook Matching Engine

- System SHALL automatically recommend playbook based on: account risk level, contract value, industry vertical, customer lifecycle stage
- System SHALL support A/B testing of playbook effectiveness
- System SHALL allow CSM/AE to override recommendations

2.4.3 FR-4.3: Personalized Messaging

- System SHALL generate personalized email templates with dynamic variables:
 - Customer-specific ROI metrics
 - Recent usage statistics
 - Relevant case studies from similar companies
 - Competitive insights (if applicable)
- Templates SHALL maintain brand voice and compliance requirements

2.5 FR-5: Outreach Cadence Optimization

2.5.1 FR-5.1: Multi-Channel Sequencing

- System SHALL recommend outreach sequence across channels: Email, Phone Call, LinkedIn Message, In-Product Notification
- System SHALL optimize timing based on: historical engagement patterns, recipient time zone, industry benchmarks
- System SHALL support customizable cadence templates (3-touch, 5-touch, 7-touch sequences)

2.5.2 FR-5.2: Task Automation

- System SHALL automatically create tasks in Salesforce for recommended actions
- System SHALL set due dates aligned with playbook timeline
- System SHALL send reminders 24 hours before task due date

2.6 FR-6: Sentiment & Engagement Analysis

2.6.1 FR-6.1: Email Sentiment Tracking

- System SHALL analyze sentiment from customer emails using NLP (spaCy, Hugging Face)
- System SHALL classify sentiment as Positive, Neutral, Negative with confidence score
- System SHALL detect sentiment shifts (declining trend over 30-day window)

2.6.2 FR-6.2: Engagement Monitoring

- System SHALL track engagement metrics: email open rate, link click rate, meeting acceptance rate, response time
- System SHALL flag disengaged accounts (no response to 3+ outreach attempts)

2.7 FR-7: Analytics & Reporting

2.7.1 FR-7.1: Renewal Pipeline Dashboard

- Dashboard SHALL display:
 - Total ARR at risk (segmented by risk level)
 - Renewal rate forecast (current quarter, next quarter)
 - Top 10 at-risk accounts by ARR
 - Churn reason analysis (historical)
- Dashboard SHALL support filtering by: renewal date range, account segment, assigned CSM/AE

2.7.2 FR-7.2: Expansion Revenue Tracking

- Dashboard SHALL display:
 - Total expansion pipeline value
 - Upsell conversion rate
 - Average deal size by opportunity type
 - Time-to-close for expansion deals

2.7.3 FR-7.3: Agent Performance Metrics

- System SHALL track:
 - Prediction accuracy (renewal outcome vs. predicted risk)
 - Playbook effectiveness (conversion rate by playbook type)
 - Alert response time (time from alert to first action)
 - Revenue saved via early intervention

2.7.4 FR-7.4: Executive Reports

- System SHALL generate weekly executive summary including: ARR retention forecast, Top risks & mitigations, Expansion opportunities closed, YoY performance trends
- Reports SHALL be exportable in PDF and CSV formats

2.8 FR-8: Integration Requirements

2.8.1 FR-8.1: Salesforce Integration

- System SHALL sync bidirectionally: Accounts, Opportunities, Contracts, Tasks, Activities
- System SHALL support custom Salesforce objects
- System SHALL handle API rate limits (5,000 calls/day for Enterprise edition)

2.8.2 FR-8.2: Billing Platform Integration

- System SHALL ingest data from Stripe/Chargebee: Subscription details, Payment history, Plan changes, Failed charges
- System SHALL process webhook events in real-time

2.8.3 FR-8.3: Analytics Platform Integration

- System SHALL collect product usage data from: Google Analytics (page views, session duration), Mixpanel (event tracking, funnel analysis), Custom analytics APIs

2.9 FR-9: Notification System

2.9.1 FR-9.1: Alert Delivery

- System SHALL support notification channels: Slack (direct message, channel post), Email (digest or real-time), In-app notification center, Microsoft Teams
- Users SHALL configure notification preferences per alert type

2.9.2 FR-9.2: Alert Types

- System SHALL generate alerts for:
 - High-risk account detection
 - Upsell opportunity identification
 - Contract expiration (30/60/90-day reminders)
 - Failed payment events
 - Significant usage decline

2.10 FR-10: Security & Compliance

2.10.1 FR-10.1: Authentication & Authorization

- System SHALL support SSO via OAuth 2.0 (Okta, Azure AD)
- System SHALL enforce role-based access control (RBAC): Admin, Sales Manager, CSM, AE, Read-Only
- System SHALL log all user actions for audit trail

2.10.2 FR-10.2: Data Privacy

- System SHALL encrypt data at rest (AES-256) and in transit (TLS 1.3)
- System SHALL support GDPR/CCPA compliance (data anonymization, deletion)
- System SHALL mask sensitive PII in non-production environments

3 Flow Diagram / Architecture Diagram

3.1 System Architecture Overview

The Renewal & Upsell Advisor follows a microservices architecture with three primary layers:

Figure 1: System Architecture Diagram - High Level

eraser

Figure 2: System Architecture Diagram - Detailed Data Flow

1. **Integration Layer:** Handles bidirectional data synchronization with external systems (Salesforce, Stripe, Analytics platforms)
2. **Processing Layer:** Executes data transformation, feature engineering, ML inference, and business logic
3. **Presentation Layer:** Provides user interfaces (dashboard) and notification delivery

3.2 Data Flow

Ingestion Phase:

1. External systems (Salesforce, Stripe, Analytics) push data via webhooks or API polling
2. Integration Service validates and queues incoming data
3. ETL Pipeline processes raw data and stores in Data Warehouse

Processing Phase:

1. Feature Engineering Service extracts signals from historical data
2. ML Inference Service calculates risk scores and upsell propensity
3. Playbook Engine matches accounts to recommended plays
4. Results stored in PostgreSQL for real-time access

Action Phase:

1. Notification Service triggers alerts (Slack, Email) based on threshold rules
2. Workflow Automation creates tasks/opportunities in Salesforce
3. Dashboard displays insights and recommendations to users

3.3 Architecture Components

Microservices:

- Integration Service (Node.js / Python FastAPI)
- ETL Pipeline Service (Apache Airflow)
- Feature Engineering Service (Python)
- ML Inference Service (Python + MLflow)
- Playbook Recommendation Engine (Python)
- Notification Service (Python + Celery)
- Dashboard API (FastAPI)
- Frontend Application (React)

Data Stores:

- PostgreSQL: Contracts, accounts, opportunities, tasks
- MongoDB: Event logs, unstructured customer interactions
- Redis: Session cache, API response cache, task queue
- Snowflake/BigQuery: Historical analytics, reporting
- S3: Model artifacts, exported reports

Supporting Infrastructure:

- API Gateway (Kong / AWS API Gateway): Rate limiting, authentication
- Message Queue (RabbitMQ / AWS SQS): Async task processing
- Load Balancer (AWS ALB): Traffic distribution
- Monitoring Stack (Prometheus + Grafana): Metrics, alerts

3.4 Detailed Flow Descriptions

3.4.1 Flow 1: Churn Risk Detection

1. Daily batch job retrieves contracts expiring in 90 days from Salesforce
2. System fetches associated usage data (Google Analytics), payment history (Stripe), support tickets (Zendesk)
3. Feature Engineering Service calculates: 30-day login frequency decline, feature adoption rate, NPS score, payment punctuality score
4. ML Model predicts churn probability for each account
5. Accounts with risk score >70 trigger High Risk alert
6. Playbook Engine recommends intervention playbook
7. Notification sent to assigned CSM via Slack with action items
8. System creates task in Salesforce: "Schedule Executive Business Review"

3.4.2 Flow 2: Upsell Opportunity Identification

1. Real-time webhook from product analytics detects: Account XYZ reaches 85% user license utilization
2. System retrieves account profile: current plan tier, contract value, renewal date
3. Upsell Propensity Model calculates expansion likelihood (78% probability)
4. System estimates expansion value: +25 seats = \$75K additional ARR
5. Opportunity automatically created in Salesforce with "Qualified" stage
6. Personalized email template generated: "Your team is growing fast. Unlock 25 more seats with preferred pricing."
7. AE receives in-app notification with recommended talk track
8. System schedules 3-touch follow-up sequence (Email Day 1, Call Day 3, Email Day 7)

3.4.3 Flow 3: Renewal Forecast Generation

1. Monthly batch job aggregates all renewals for next quarter
2. System calculates weighted renewal forecast: $(\text{Low Risk ARR} \times 95\%) + (\text{Medium Risk} \times 75\%) + (\text{High Risk} \times 40\%)$
3. Expansion pipeline added to base renewal forecast
4. Historical conversion rates applied to upsell opportunities
5. Dashboard displays: Total forecasted ARR, Confidence intervals (P10, P50, P90), Risk-adjusted retention rate
6. Executive report exported to PDF and emailed to VP Sales

Note: Detailed architecture diagram is provided separately as a visual chart. Reference the flow diagram PDF attached with this SRS document.

4 Competitive Analysis

4.1 Market Landscape

The renewal and upsell intelligence market includes specialized customer success platforms, revenue operations tools, channel automation platforms such as Yagna iQ, and AI-powered sales enablement solutions. Key competitors offer varying degrees of automation, predictive analytics, CPQ capabilities, and CRM/channel integration.

4.2 Primary Competitors

4.2.1 Gainsight Customer Success

Product URL: <https://www.gainsight.com/>

Strengths:

- Industry-leading customer health scoring with ML-powered predictions
- Native Salesforce integration with deep data synchronization
- Comprehensive playbook automation and journey orchestration
- Strong analytics and executive reporting dashboards
- Extensive third-party integrations (200+ apps)

Weaknesses:

- Complex setup requiring significant admin resources
- Higher cost (enterprise pricing starts at \$50K+/year)
- Steeper learning curve for end users
- Limited flexibility for mid-market companies

Technical Approach: Gainsight uses Bayesian recursive models for churn prediction, combining usage telemetry, support data, and sentiment analysis. Their "Rules Engine" triggers automated workflows based on multi-dimensional health scores. Data aggregation occurs in their proprietary data warehouse with scheduled ETL jobs from source systems.

4.2.2 ChurnZero

Product URL: <https://churnzero.com/>

Strengths:

- Real-time customer engagement tracking and alerts
- Easy-to-use interface with faster time-to-value
- Strong renewal forecasting with Forecast Hub
- AI agents (Vibes, Harbinger, Beacon) for risk and opportunity detection
- Competitive pricing for mid-market segment

Weaknesses:

- Less robust analytics compared to Gainsight
- Limited customization for complex enterprise workflows
- Fewer native integrations (relies on Zapier for some connections)
- Reporting can feel rigid per user feedback

Technical Approach: ChurnZero emphasizes real-time event streaming from product analytics. Their AI agents use sentiment shift detection (NLP on emails/chat) and behavioral pattern matching. Renewal forecasting combines health scores with historical win/loss rates. They employ a segment-based approach for playbook recommendations.

4.2.3 Totango

Product URL: <https://www.totango.com/>

Strengths:

- Product adoption-focused with deep usage analytics
- Flexible pricing and modular features (scale as needed)
- Strong customer segmentation capabilities
- Pre-built success plans and templates
- Good balance of simplicity and functionality

Weaknesses:

- Churn prediction less sophisticated than Gainsight
- Limited upsell recommendation intelligence

- Fewer automated playbook options
- Smaller user community and ecosystem

Technical Approach: Totango's core philosophy centers on product usage as the primary health indicator. They auto-generate health scores based on feature adoption patterns without requiring manual configuration. Segments are dynamically updated based on lifecycle stage and account attributes. Renewal risk is inferred from usage decline trends.

4.2.4 Catalyst (formerly ProsperWorks)

Product URL: <https://www.catalyst.io/>

Strengths:

- Unified customer data platform (CDP) approach
- Strong revenue forecasting and pipeline management
- AI-driven insights with "moments" (trigger events)
- Modern UI with intuitive UX

Weaknesses:

- Relatively new player (smaller customer base)
- Fewer proven ML models compared to Gainsight
- Limited third-party integration ecosystem
- Still building out playbook automation

Technical Approach: Catalyst aggregates customer data into a unified profile (CDP model). Their "moments" feature detects trigger events (e.g., usage spike, support escalation) using rule-based and ML hybrid models. Revenue forecasting uses cohort analysis and time-series prediction.

4.2.5 Yagna iQ Channel Ecosystem Platform

Product URL: <https://www.yagnaiq.com/>

Strengths:

- **High ROI & Efficiency:** Proven to save 125+ hours per 100 contracts and increase on-time renewal rates by 20–25%.
- **Zero-Touch Automation:** "Set and forget" workflows for low-value, high-volume renewals, triggering proactive quotes 90/60/30 days in advance.
- **Unified Channel View:** Solves the "1000 Portal Problem" by aggregating multi-vendor data into a single dashboard for distributors and resellers.
- **Security & Integration:** ISO 27001 certified with native connectors for Salesforce, Microsoft Dynamics, and major ERPs.

Weaknesses:

- Highly specialized for *indirect* channel sales (Vendors → Distributors → Resellers), which may be overkill for direct-only SaaS businesses.
- UI/UX is function-first (industrial strength) rather than "consumer-grade" aesthetic compared to modern PLG tools.

Technical Approach: Yagna iQ operates as a cloud-native "Channel Ecosystem" platform. It ingests "Golden Record" data from vendor ERPs/CRMs and normalizes it for downstream partners. Its core engine uses AI/ML to identify "Smart Leads" for cross-selling (XSUS Cloud) and automates the entire quote-to-cash cycle for renewals (Renewal Cloud) using event-driven triggers.

4.3 Innovation & Differentiation Strategy

4.3.1 Core Innovation: The "Agentic" Shift

The primary innovation of our Renewal & Upsell Advisor is the fundamental shift from **Passive Analytics** (Dashboards) to **Active Agency** (Co-Pilots).

1. **From "Insights" to "Actions":** Legacy platforms (Gainsight, Yagna iQ) identify a risk and populate a dashboard, requiring a human Key Account Manager (KAM) to log in, interpret the data, and decide on an action. **Our Innovation:** The Agent identifies the risk and *immediately drafts the remedial action* (e.g., a personalized email, a meeting agenda, or a discount offer) for the KAM to approve. The KAM manages *decisions*, not data.
2. **Generative vs. Static Playbooks:** Competitors use rigid "If-Then" rule engines (e.g., "If health score < 50, send Email Template B"). **Our Innovation:** We utilize Large Language Models (LLMs) to generate *context-aware* playbooks on the fly. The Agent reads the last 10 emails, analyzes the support ticket tone, and generates a truly personalized message that acknowledges specific client pain points, rather than using a generic template.
3. **Unified "Growth Loop" Architecture:** Most platforms treat "Renewals" (Defense) and "Upsells" (Offense) as separate pipelines. **Our Innovation:** We model them as a single **Revenue Optimization Problem**. Every interaction is scored for both Retention Probability and Expansion Propensity simultaneously. The Agent will suppress an upsell offer if the renewal risk is high, or leverage a successful renewal to immediately pitch an upsell, creating a continuous growth loop.

4.3.2 Our Competitive Advantages

1. **Zero-Login Experience:** The Agent lives where the KAM works (Slack, Teams, Email). There is no "platform" to learn or log into.
2. **Hyper-Personalization at Scale:** Using Generative AI to craft unique account plans for thousands of long-tail customers that would otherwise receive generic automation.
3. **Faster Time-to-Value:** 7-day deployment via API overlay, compared to 6–12 week implementation cycles for heavy platforms like Yagna or Gainsight.

4.4 Strategies to Outperform Yagna iQ

To beat Yagna iQ, we go beyond their renewal-focused automation, basic AI churn prediction (renewal windows only), and limited multi-vendor CPQ by adding cutting-edge, high-margin features that solve deeper channel pains like real-time intelligence, global scalability, and autonomous revenue ops.

4.4.1 Add Autonomous Revenue Agents

Deploy AI agents that don't just predict churn (Yagna scans 90/180-day data) but **autonomously negotiate renewals** via chat/email, execute upsells using customer usage data, and self-optimize pricing in real-time—reducing CSMs by 70% vs. Yagna's 20-25% renewal lift.

4.4.2 Embed Real-Time External Signals

Unlike Yagna's internal install-base mining, we integrate **live signals** from CRMs, billing (Stripe/Zuora), support tickets, and macroeconomic data (e.g., recession flags) for 360° churn prevention. We predict churn 365 days out with 90%+ accuracy using multimodal LLMs analyzing emails, NPS, and device telemetry.

4.4.3 Launch Vertical-Specific Accelerators

Target niches Yagna ignores:

- **MSPs:** Auto-generate SOC2-compliant quotes with built-in compliance scoring.
- **Telecom:** 5G/edge network simulators extending their WiFi survey.
- **Healthcare:** HIPAA-ready patient data anonymization for cross-sells.

4.4.4 Go Global with Embedded Finance

Add native crypto/stablecoin payments, instant global tax localization (200+ countries), and dynamic forex hedging—surpassing Yagna's basic currency conversion and Avalara integration for emerging market dominance.

4.4.5 Gamified Partner Ecosystems

Build viral partner adoption with leaderboards, automated SPIFFs, and NFT-based deal badges, driving 5x faster onboarding than Yagna's dashboard-only approach.

4.5 Feature Comparison Matrix

Feature	Our Agent	Gainsight	ChurnZero	Totango	Catalyst	Yagna iQ
Churn Prediction	Action-Oriented	Descriptive	Descriptive	Basic	Descriptive	Analytical
Upsell Propensity	Generative Pitch	Partial	Yes	Limited	Yes	Smart Leads

Playbook Engine	GenAI (Dynamic)	Rigid Rules	Rigid Rules	Rigid Rules	Rigid Rules	Rigid Workflow
Real-Time Alerts	Drafts Re-sponse	Notification	Notification	No	Notification	Quote Trigger
User Interface	Chat/Slack (Headless)	Dashboard	Dashboard	Dashboard	Dashboard	Portal
Salesforce Sync	bidirectional Agent	Native Sync	Sync	Sync	Native Sync	Native Sync
Deployment	7 Days (Overlay)	8–12 weeks	4–6 weeks	2–4 weeks	3–5 weeks	4–8 weeks
Pricing	Usage/Outcome	Seat-Based	Seat-Based	Seat-Based	Seat-Based	Volume-Based
Core AI Tech	LLM + RAG	Predictive ML	Predictive ML	Basic ML	Predictive ML	Predictive ML

4.6 Market Presence & Feedback

Platform	Est. Customers	Revenue (Latest Est.)	Review Highlights
Our Agent	Emerging; no public count (Sutherland-linked for contact centers)	Not disclosed	Limited reviews; praised for AI agent success in ops
Gainsight	Thousands (nearly 200 public enterprises; segmented by revenue tiers)	\$272M ARR	Strong for CS scalability (NPS 85); top-rated in benchmarks
ChurnZero	Hundreds (mid-market focus, e.g., Imagine Learning)	Not disclosed (\$50-100M inferred from market share)	Good real-time alerts; 4.5/5 avg. for usability
Totango	5,000+ businesses (incl. Zoom, Google)	Not disclosed	Solid AI forecasting; mixed on pricing (4/5 avg.)
Catalyst	No specific count (CS platform focus)	Not disclosed	Basic features; limited feedback available
Yagna iQ	30 vendors, 5K resellers (channel-focused)	Not disclosed	Positive for CPQ/sales streamlining; niche appeal
