

Yagna iQ Platform Architecture & Capabilities

Based on Official Product Documentation

February 8, 2026

1 Platform Overview

Yagna iQ is a comprehensive **Channel Ecosystem and Automation Platform** designed to eliminate manual processes and recurring revenue leakage in the distribution channel. It digitally connects Vendors, Distributors, Resellers, and End Customers on a secure cloud environment, facilitating seamless channel transactions for Leads, Quotes, Orders, Invoices, and Payments.

1.1 Core Value Proposition

- **One-Stop SaaS Solution:** Replaces fragmented tools with a unified platform for Renewal Automation, Channel CPQ, and Lead Management.
- **Zero-Touch Automation:** Transforms "reactive" renewal quoting into a "proactive," automated process.
- **Long-Tail Monetization:** specifically targets low-value, high-volume transactions that are often neglected due to manual processing costs.
- **Security Compliance:** ISO 27001 certified, CyberGRX assessed, and Cisco CASPAR validated.

2 Module 1: Renewal Cloud (Recurring Revenue Automation)

Persona Targets: Vendor, Distributor, Reseller

2.1 Problem Statement

The "1000 Portal Problem": Channel partners struggle with disparate vendor portals and manual data entry (Excel/Email), leading to reactive quoting, delays, errors, and lost revenue. A manual renewal quote process can take hours of labor and weeks to deliver.

2.2 Key Features

- **Proactive Quotes:** Automates the creation and delivery of renewal quotes 90/60/30 days in advance.
- **Multi-Vendor Aggregation:** Consolidates renewal data from multiple vendors into a single dashboard.
- **Zero-Touch Workflow:** Automates quote generation, margin application, currency conversion, and tax calculation.
- **Flexible Journeys:** Customizable workflows for different partner types and renewal scenarios (e.g., Low-touch vs. High-touch).
- **End-Customer Automation:** Allows resellers to send white-labeled, automated renewal notifications directly to end customers with embedded payment links.

2.3 Quantifiable Benefits (ROI)

- **Efficiency:** Saves at least **125 hours** for every 100 contracts/subscriptions processed.
- **Revenue Growth:** Increases On-Time Renewal Rate by **20-25%**.
- **Conversion:** Boosts conversion rates for low-dollar contracts by **10-15%**.
- **Productivity:** Shifts workforce focus from "laborious follow-ups" to "efficient deal closure."

3 Module 2: XSUS Cloud (Cross-Sell & Upsell)

Persona Targets: Vendor, Distributor, Reseller

3.1 Problem Statement

Customer Acquisition Cost (CAC) is rising (5-25x more expensive than retention). Businesses struggle to monetize their existing Install Base (IB) due to a lack of data analytics and visibility into white-space opportunities.

3.2 Key Features

- **Smart Lead Generation:** Uses Data Mining and AI/ML to sift through Install Base data.
- **Tech Refresh Identification:** Automatically identifies End-of-Life (EOL) products and suggests modern replacements.
- **White-Space Analysis:** Identifies missing product attach opportunities (e.g., "Customer has Router, needs Security License").
- **Actionable Quotes:** Generates leads that come with a pre-configured quote, not just contact info.

- **Perpetual to Subscription:** Identifies opportunities to migrate legacy perpetual licenses to recurring subscription models.

4 Module 3: Channel CPQ (Configure, Price, Quote)

Persona Targets: Vendor, Distributor, Reseller

4.1 Problem Statement

Vendor CPQ tools are often internal-only (CRM-based) and do not extend to channel partners. Partners are forced to use Excel or Email for complex configurations, leading to errors and lack of pipeline visibility.

4.2 Key Features

- **Multi-Vendor CPQ:** Enables distributors/resellers to build quotes containing products from multiple vendors in a single cart.
- **Guided Selling:** Questionnaire-based configuration to ensure 100% accurate quotes.
- **Advanced Pricing Engine:** Supports Volume-based, Attribute-based, Contracted, and Goal-Seek pricing.
- **Discount Management:** Handles complex discount stacking and approval authority hierarchies.
- **Subscription Support:** Native handling of subscription and bundle pricing logic.

4.3 Benefits

- **Speed:** Faster time-to-market for new product bundles.
- **Accuracy:** Eliminates manual configuration errors and rework.
- **Compliance:** Enforces regulatory and commercial rules automatically.

5 Module 4: Predictive WiFi Site Survey

Target: Networking Vendors Partners

5.1 Overview

A cloud-based tool that eliminates the need for expensive, onsite RF engineering visits during the pre-sales phase.

5.2 Capabilities

- **Auto-Detect Walls (Beta):** Automatically identifies walls from uploaded floor plans.
- **environment Simulation:** Simulates RF propagation based on building materials (Concrete, Glass, Drywall).
- **Automatic AP Placement:** AI algorithms place Access Points (APs) for optimal coverage (RSSI, SNR).
- **Multi-Vendor Support:** Supports Cisco, Aruba, Ruckus, Extreme, Huawei, Ubiquiti, Aerohive.
- **BOM Generation:** Automatically creates a Bill of Materials (BOM) based on the survey results, usable in the CPQ module.
- **Google Maps Integration:** Locate buildings and define target coverage dimensions.

6 Integration Ecosystem

Yagna iQ features an "Open and Unified API" architecture to simplify 1:1 integrations.

6.1 Supported Integrations

- **CRMs:** Salesforce, Microsoft Dynamics, Zoho.
- **Cloud Platforms:** AWS, Microsoft Azure, Google Cloud.
- **Vendors (Direct):** Cisco, VMware, Palo Alto Networks, Fortinet, Juniper, Checkpoint, Dell, HP, NetApp.
- **Utilities:** Open Exchange Rates (Currency), Avalara (Tax).

7 Industry Recognition

- ****Gartner:**** Magic Quadrant for CPQ Peer Insights.
- ****Forrester:**** Landscape Report for CPQ.
- ****Nucleus Research:**** Automated Renewal Cloud coverage.
- ****Canalys:**** Channel Ecosystem Landscape.
- ****CRN:**** Tech Innovators Award (MSP Platforms).
